

## **Univar's *Compassionate Use Programme* for Trientine Dihydrochloride**

Univar plc is the UK manufacturer and supplier of 300 mg Trientine Dihydrochloride capsules for the treatment of Wilson's disease ([www.trientine.com](http://www.trientine.com)). In a new initiative for users of the drug who live predominantly in developing countries, Univar has established a *compassionate use programme*. Working in association with the Wilson's Disease Association, International based in the USA, Univar has agreed to ship Trientine Dihydrochloride capsules to **six** designated countries in Eastern Europe, Asia & Africa.

If you live in one of the countries covered by this program and you qualify for compassionate use, Univar will, subject to assessment and location, supply and deliver Trientine Dihydrochloride capsules **free of charge**.

The *compassionate use programme* became effective on March 1<sup>st</sup> 2010. Requests for provision of Trientine Dihydrochloride under this programme should be made to [Aderonke.faboro@univareurope.com](mailto:Aderonke.faboro@univareurope.com)

### **NOTE**

1. In the USA, Trientine Dihydrochloride is called Trientine Hydrochloride. These two names are synonymous.
2. Under this scheme, Univar is committed to supplying a limited number of bottles of Trientine Dihydrochloride capsules per year so this does not mean all requests can be accommodated.
